SAFETY AND SOUND ENCLOSURES

12-4

TYPICAL APPLICATIONS:

Sound Enclosures are utilized to block the sound and contain it within the machine.

These are typically sheet metal enclosure panels and doors that may have interior foam linings if required to meet your Time Weighted Average (TWA) sound requirements.

Safety Enclosures are utilized to encase a machine and keep employees away from automatic moving devices and pinch points that may harm them.

These are typically sheet metal panels or expanded metal panels to aid with viewing the equipment running within.

SYSTEM BENEFITS:

- Aids hazardous ergonomic considerations
- Reduced floor space requirements
- Safety relay circuit protection of operator
